Atkinson Fencing invest in new Hyster A-Series forklifts

SITUATION

Atkinsons Fencing are a leading manufacturer of timber fencing panels and garden timber products. For over 50 years, from their West Yorkshire location, they have been delivering first class service and support to their customers.

SOLUTION

As part of their ongoing commitment to quality service, Atkinsons have invested in 3 new Hyster A-Series forklifts, which will complement their existing fleet that includes Hyster and Yale forklifts.

As a long-term customer of Briggs Equipment, the two companies have worked collaboratively to build a materials handling fleet that is perfectly suited to meet Atkinsons' on-site requirements and their own customer demands.

RESULT

To help get the most out of their fleet, the Management Team at Atkinsons make use of Briggs Equipment's BE Portal fleet management software. The platform allows for comprehensive analysis of the fleet's performance and the capability to schedule and review maintenance and engineer requests.

The new trucks have been with the customer for a few months now and are already having a positive impact on their operations and have perfectly complemented their existing machines. The Hyster A-Series is a really versatile and robust product that is designed to deliver for businesses in every industry.

"We are delighted to continue our partnership with Briggs Equipment and the new Hyster A-Series trucks have fitted perfectly into our operations.

The forklifts have been received extremely well by our operators and as a result of an extensive site evaluation, we know we have the right equipment for our requirements.

"The entire process from order to delivery has been a smooth one and I'd like to thank Joe and the team for their ongoing support. We will continue to work closely with the Briggs team to ensure we get the most out of our fleet and includes using the BE Portal platform where necessary."

Jason Atkinson, Managing Director, Atkinsons Fencing
